Theoretical Computer Science
Logic, semantics and theory of programming

Volume 228, Numbers 1–2, 28 October 1999

Mathematical Foundations of Programming Semantics

Guest Editors: S. Brookes
M. Mislove

Abstracted/Indexed in: ACM Computing Reviews, Compuscience, Computer Abstracts, Current Contents: Engineering, Technology & Applied Science, Engineering Index/Compendex, INSPEC Information Services, Mathematical Reviews, Zentralblatt für Mathematik

Contents

Foreword

S. Brookes and M. Mislove

Dedication

S. Brookes, M. Main, A. Melton, M. Mislove and D. Schmidt 3

Fundamental Study

A.D. Gordon
Bisimilarity as a theory of functional programming 5

Contributions

P.J. Freyd, P.W. O'Hearn, A.J. Power, M. Takeyama, R. Street and R.D. Tennent
Bireflectivity 49

P. Gardner
Closed action calculi 77

A. Jeffrey
A fully abstract semantics for a higher-order functional language with nondeterministic computation 105

N.D. Jones
LOGSPACE and PTIME characterized by programming languages 151

J. Maraist, M. Odersky, D.N. Turner and P. Wadler
Call-by-name, call-by-value, call-by-need and the linear lambda calculus 175

P.W. O'Hearn, A.J. Power, M. Takeyama and R.D. Tennent
Syntactic control of interference revisited 211

P.W. O'Hearn and U.S. Reddy
Objects, interference, and the Yoneda embedding 253

Author index volume 228 283
